

(Name of the Product)	Registration Form Efbet	
Prepared By:	Beatris Dimitrova	
(Date)	18.01.2023	
TABLE OF CONTENTS (TOC)		
Test Objective:	Ensure that the website registration form is functional and accepts valid input for all required fields, properly validates name, date of birth, phone number, gender and EGN number. Correctly handles the name with extra characters. It can handle a large amount of data sending without crashing or becoming unresponsive.	
Test Scope:	-The test will cover the functionality of the registration form on the website	
	-The test will be performed on Chrome Web Browser	
Test Approach:	-Manually test the registration form by entering valid and invalid input for all required fields	
	--Automatically test the registration form by entering valid and invalid input for all required fields	
	-Verify that the form properly validates the information format	
	-Verify that the form displays a success message upon successful submission and redirects to the appropriate page	
	-Verify that the form can handle large volume of data submission without crashing or becoming unresponsive	
Test Environment:	The tests will be performed on Chrome Web Browser	
	Tthe tests will be performed via automation tests in <a href="#">Cypress.io</a>	
	The test will be performed on a live enviornment	
Test Data:	-Valid and invalid input for all required fields (e.g. name, birth, password etc.)	
	-Special characters in the name field	
	-Large volume of data submission	
Test Deliverables:	*Test scenarios	
	*Test cases	
	*Test results	
Test Criteria for success:	-The registration form should accept valid input for all required fields and display appropriate error messages for invalid input	No error messages in the form
	-The form should display a success message upon successful submission and redirect to the appropriate page	
	-The form should be able to handle large volume of data submission without crashing or becoming unresponsive	
	-The form should work correctly on different web browsers and devices.
